

# Individual reflection Kerstin Wadman

- what do I want to learn or understand better?

I hope to better understand how to work in software projects over all, both how to construct a development environment and how to communicate between the members in the team. I haven't used Github before and really want to learn how to navigate and use the website in an effective and useful way. Also, I will hopefully improve my programming skills as well.

- how can I help someone else, or the entire team, to learn something new?

I hope I can help the team to allocate our resources in an effective way and to see each other's strengths and how everyone can be useful no matter what skills you have. I also want to spread positive energy and decrease the stress level by not setting unreachable goals.

- what is my contribution towards the team's use of Scrum?

I have used Trello (as scrum board) a few times before and hopefully I can help the team get started in a good way and make sure that everyone understands how to use it.

- what is my contribution towards the team's deliveries?

I want to develop my programming skills so I want to learn how the IT-students work in these types of projects and how they write code in an effective way. It feels really exciting to work with this type of project!
